**Under 75 mortality rate from all cardiovascular diseases**

Age-standardised mortality rate from all cardiovascular diseases (including heart disease and stroke) in persons less than 75 years of age per 100,000 population.

**Performance:**

Source: Public Health Outcomes Framework – indicator 4.04i

**Introduction**

There have been huge gains over the past decades in terms of better treatment for cardiovascular disease (CVD) and improvements in lifestyle, but to ensure that there continues to be a reduction in the rate of premature mortality from CVD, there needs to be concerted action in both prevention and treatment.

**Current position**

From 2003-05 to 2013-15, mortality rates from all cardiovascular diseases across Warwickshire have reduced by around 40%, matching the regional and national falls.

Local analysis of the Primary Care Mortality Database, for 2010-14, shows five wards where mortality rates were statistically significantly higher than for Warwickshire.

Bar Pool ward, in Nuneaton & Bedworth Borough, had a rate which almost double the county rate.

**Under 75 directly standardised mortality rate from all cardiovascular diseases, per 100,000 population, 2003-05 to 2013-15**

**Under 75 directly standardised mortality rate from all cardiovascular diseases by district and borough, per 100,000 population, 2003-05 to 2013-15**

**Under 75 directly standardised mortality rate from all cardiovascular diseases, by ward (2010-14)**

Source: Primary Care Mortality Database

Stratford-on-Avon District has the 4th lowest cardiovascular disease mortality rate in the West Midlands

Source: Public Health Outcomes Framework – indicator 4.04i

NB: data suppressed in wards where there were less than 25 CVD mortalities as numbers are too small to calculate reliable rates.
